

## **Skatepark Designers & Builders Resource List**

*A list of vendors for your upcoming skatepark project*

Below you will find a list of concrete skatepark specialists, from designers to builders. These are the teams that can support your local skatepark build. As your search for the right specialist begins, we recommend that you start with a large list of vendors that specialize in “poured-in-place concrete” skatepark design and/or building, and from there schedule meetings to help narrow down the vendor that will be best suited for your community-based project.

### *Helpful tips from TSP experts for sourcing a skatepark specialist:*

- **Request for Qualifications (RFQ):** If you need to go to bid for construction, we advise that you secure a list of qualifications from the designers and/or builders before your project goes out to bid. Simply submit a RFQ to the vendor(s) of interest and review what is provided with your internal team.
- **The 3 in 5 Rule:** When possible, it’s best to hire a specialty construction firm that has been responsible for ***a minimum of 3 concrete skateparks in the last 5 years***, either as a primary contractor or subcontractor responsible for the skate-able footprint for each skatepark project.
- **Collaboration is Key:** Gather support from local skateboarders, BMX riders and future skatepark users to help direct the design process with the selected design and/or build firm. These users will be essential to creating a unique skatepark that best suits your community’s needs and budget.

For more information on public skatepark planning, including design and construction specifications, see the Skatepark Best Practices document at [www.skatepark.org](http://www.skatepark.org).
